## Massachusetts Institute of Technology.

---

FROM the many interesting features of the Massachusetts Institute of Technology these views are prepared, as presenting in a limited degree the most important characteristics of the institution.

The collection consists of twenty views. The prints are made direct from photographic negatives by the Boston Photogravure Company, and are executed in the most artistic manner.

To the students in the Institute of Technology this book affords a pleasing presentation of familiar subjects in souvenir form. To others, the collection presents a limited view of the laboratories and workshops of this celebrated institution of technical training.
